

Joshua Tree Guide

National Park Service
U.S. Department of the Interior
Joshua Tree National Park

Photo by Stacy Manson

At first glance, the desert seems lifeless and barren. However, a closer look reveals a landscape teeming with life, providing a home for hundreds of species.

Joshua Tree National Park is comprised of two distinct desert environments - the Mojave and the Colorado deserts. Joshua trees dwell in the higher elevations of the Mojave, while creosote bushes, cholla cactus, and ocotillo dominate the lower Colorado.

A changing landscape greets you at every turn. Joshua tree forests intermingle with immense boulder outcroppings. Reminders of ancestral peoples combine with the remains of mining infrastructure and pioneer homes.

On your journey through the park, examine the transitions you see, feel the struggles of survival in an unforgiving place, and discover the subtle beauty of the desert.

Ocotillos in bloom. NPS Photo

Hello and Welcome to Joshua Tree National Park!

Visiting Joshua Tree National Park will provide you with an opportunity to experience an environment completely different from what you might ordinarily see – the uniqueness, diversity and grandeur of two desert ecosystems found in the “California Desert.” With close examination, you will find subtle and intense beauty like no other.

It is our goal to ensure you have a safe and fulfilling experience when enjoying this unique landscape. The weather varies greatly with the seasons, so be prepared and always carry water. Please keep your distance from wildlife – the animals are wild.

I have found through my work here that we all can find adventures, challenges, and unforgettable experiences while enjoying the park. It is my sincere hope that you have a safe, enjoyable, and memorable time during your visit to Joshua Tree National Park.

Mark A. Butler

Mark Butler, Superintendent
Joshua Tree National Park

Experience Joshua Tree National Park

Attend a Ranger Program

Interested in learning more about Joshua Tree National Park? Join park rangers and volunteers who know it inside and out. Walks and programs listed on page 4.

Get Active

Take a hike, walk a nature trail, ride a bike, go rock-climbing. Opportunities to get your heart pumping are almost limitless. Trails are listed on page 5.

Take a Drive

Explore Park Boulevard and the Pinto Basin Road. Take the spur to Keys View for incredible panoramic views. A park map is located on pages 4 & 5.

Relax, Reflect, and Recharge

Take a moment to disconnect from the outside world. Think about what brought you here and what this place means to you.

Important Information

Park Information

getting to the park The park is located about 140 miles east of Los Angeles via I-10. Entrances to the park are located off CA HWY 62 (Twentynine Palms Highway), at the towns of Joshua Tree and Twentynine Palms. A third entrance is located about 25 miles east of Indio, via I-10.

international visitors Park information is available at visitor centers and entrance stations in Dutch, French, German, Italian, Japanese, and Spanish.

entrance fees Admission to the park is \$15 per vehicle and is good for seven consecutive days. An annual Joshua Tree Pass may be purchased for \$30 and a National Parks and Federal Recreation Lands Pass, costs \$80 (free to active US military). Both are good for 12 months. A Senior Pass may be purchased by any U.S. citizen 62 or older for \$10, and it is good for life.

Park Regulations

pets While pets are allowed in the park, their activities are restricted. They must be on a leash at all times and cannot be more than 100 feet from a road, picnic area, or campground; they are prohibited from trails, and they must never be left unattended.

off-road driving Vehicles, including bicycles, are prohibited off established roads. The desert ecosystem is fragile. Off-road driving and riding creates ruts, upsets delicate drainage patterns, compacts the soil, and leaves visual scars for years. Plants are crushed and uprooted. Wildlife shelters are destroyed, and food and water supplies are altered or obliterated. ATVs may not be used in the park.

bicycling Bicycling is permitted on public roads, both paved and dirt, but not on trails. There are no bicycle paths and many roads are narrow, so ride cautiously.

campfires Campfires are permitted in campgrounds and in picnic areas where fire grates are provided. Campfires are not allowed in the backcountry. Collecting vegetation, living or dead, is prohibited, so bring firewood.

food storage Store food in hard-sided containers your vehicle to prevent ravens, coyotes, and other wildlife from eating it.

firearms and weapons Firearms may be possessed in accordance with California state and federal laws; they may not be used in the park. Fireworks, traps, bows, BB guns, paint-ball guns, and slingshots are not allowed in the park.

food, lodging, services There are no concessions within the park. However, surrounding communities can fulfill most visitor needs.

accessibility The nature trails at Bajada, Cap Rock, and the Oasis of Mara are accessible. Keys View is accessible and Site 122 at Jumbo Rocks Campground is wheelchair accessible.

visitor centers Oasis Visitor Center (9 am - 5 pm) is located in Twentynine Palms. Joshua Tree Visitor Center, (8 am - 5 pm) is located in Joshua Tree Village. Cottonwood Visitor Center (9 am - 4 pm) serves the southern entrance. Black Rock Nature Center (Monday to Thursday 8 am - 4 pm; Friday noon - 8 pm) is open October thru May at Black Rock Campground.

commercial filming When filming or photography involves advertising a product or service, the use of models, sets, props, or the use of a restricted site, a film permit is required.

day-use and restricted areas Some areas within the park are privately owned; others protect wildlife or historical sites. Entering these areas is prohibited. Closed from dusk to dawn, day-use areas are set aside to protect sensitive populations of wildlife.

keep wildlife wild Feeding coyotes and other animals weans them from their natural food supplies and turns normally shy creatures into aggressive ones as they lose their fear of humans. It is also illegal!

horses Horseback riding is a popular way to experience the park. Because of the special requirements for stock in desert areas, you will want to request the publication on horse use before you come. Horse camping is available at Ryan and Black Rock campgrounds.

leave no trace During your visit please pick up trash around campgrounds and trails. Your actions will inspire other park visitors.

take only pictures Over 1.25 million people visit Joshua Tree National Park each year. If each visitor took just one rock or plant, the park, our national heritage, would soon be gone. Removal, disturbance, destruction, or disfigurement of anything in the park is unlawful.

lost & found Report lost, and turn in found, items at any visitor center or ranger station. Lost articles will be returned if found.

wildflowers Spring blooming periods vary with elevation, temperature, and the amount of moisture in the soil. You can find current information on the park website: www.nps.gov/jotr.

weather Temperatures vary widely from season to season. Spring and fall temperatures are most comfortable, with an average high/low of 85 and 50°F (29 and 10°C) respectively. Winter brings cooler days, around 60°F (15°C), and freezing nights. Summers are hot - over 100°F (38°C) during the day and not cooling much below 75°F (24°C) until the early hours of the morning

trash Our dry desert climate cannot quickly decompose such things as orange peels, apple cores, egg shells, and other picnic remains. Loose paper blows into bushes creating an unsightly mess, and plastic six-pack rings can strangle wildlife. Dispose of your trash in a responsible manner and recycle whatever possible.

rock climbing Climbers may replace existing unsafe bolts, and new bolts may be placed in non-wilderness areas using the bolting checklist. Bolting in wilderness requires a permit.

vehicle laws Park roads are narrow and winding. Some areas are congested. Speed limits are there for your safety and well-being. State and federal vehicle laws apply within the park.

parking Park roads, even the paved roads, are narrow, winding, and have soft, sandy shoulders. Accidents occur when visitors stop along the road to admire a view or make a picture. There are many pullouts and parking lots, so wait until you get to one before stopping.

overnight parking There is no overflow parking in the park, at visitor centers, or park headquarters. Unattended vehicles may not be parked outside of campgrounds and backcountry boards between 10 pm and 6 am.

wildlife viewing It is a thrill to see wild animals in the park, but this is their home and they should not be disturbed. This includes the use of artificial light for viewing them

For Your Safety

emergency phones In an emergency call San Bernardino Dispatch at 909-383-5651. Cell coverage is very limited inside the park. Emergency phones are located at the ranger station in Indian Cove and at Intersection Rock near Hidden Valley Campground.

dehydration It is easy to become dehydrated in arid desert environments. You should always carry water with you. If you are going to camp, we recommend one gallon per person per day. If hiking or biking, you will want to take along two gallons per person. Drink the water and do not economize. When the water is half gone, it is time to turn back.

potable water Water is available at the visitor center in Twentynine Palms, at Black Rock and Cottonwood campgrounds, at the entrance station south of Joshua Tree, and at the Indian Cove ranger station.

stay out and stay alive Mining was an important activity in this area and numerous mining sites can be found within the park. If you choose to visit them, use extreme caution and do not enter old mine workings.

sun safety That old desert sun can damage eyes as well as skin. Wear a hat and sunglasses and use sun-blocking lotion liberally.

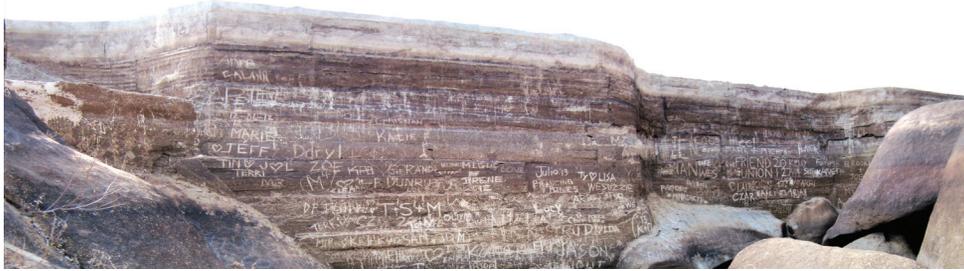

bees Bees may attack when their hives are threatened; listen for buzzing and stay away. Bees looking for water are attracted to any moisture source, including human perspiration. Don't swat at them; they might sting you. Keep drinks and food inside your vehicle. Keep car windows rolled up and use caution when exiting.

weather Temperatures vary widely from season to season. Spring and fall temperatures are most comfortable, with an average high/low of 85 and 50°F (29 and 10°C) respectively. Winter brings cooler days, around 60°F (15°C), and freezing nights. Summers are hot, over 100°F (38°C) during the day, only cooling at night.

you are responsible You are responsible for your own safety. This is a wild place and accidents do happen. Plan ahead and be prepared.

you are responsible You are responsible for knowing and obeying park rules. Complete rules and regulations are available at any visitor center. When in doubt, ask a ranger.

Keep it for the Future

Historic Barker Dam scarred by graffiti, covering nearly 500 square feet (152sq/m) of its east face.

We are all stewards of this land - if we want it to be here for future generations, we must keep it safe today.

Increasing popularity brings more and more people to Joshua Tree National Park every year. Most visitors are respectful, but there are the few who decide to leave a lasting impact on the park.

What to do if you see someone damaging park resources:

- Do not approach them.
- Note time, location, and other details including descriptions, license plate/vehicle information, and take pictures if possible.
- Contact park staff as soon as possible at the nearest visitor center or entrance station.
- To report vandalism, call 911 or park dispatch toll free at 909-383-5651.

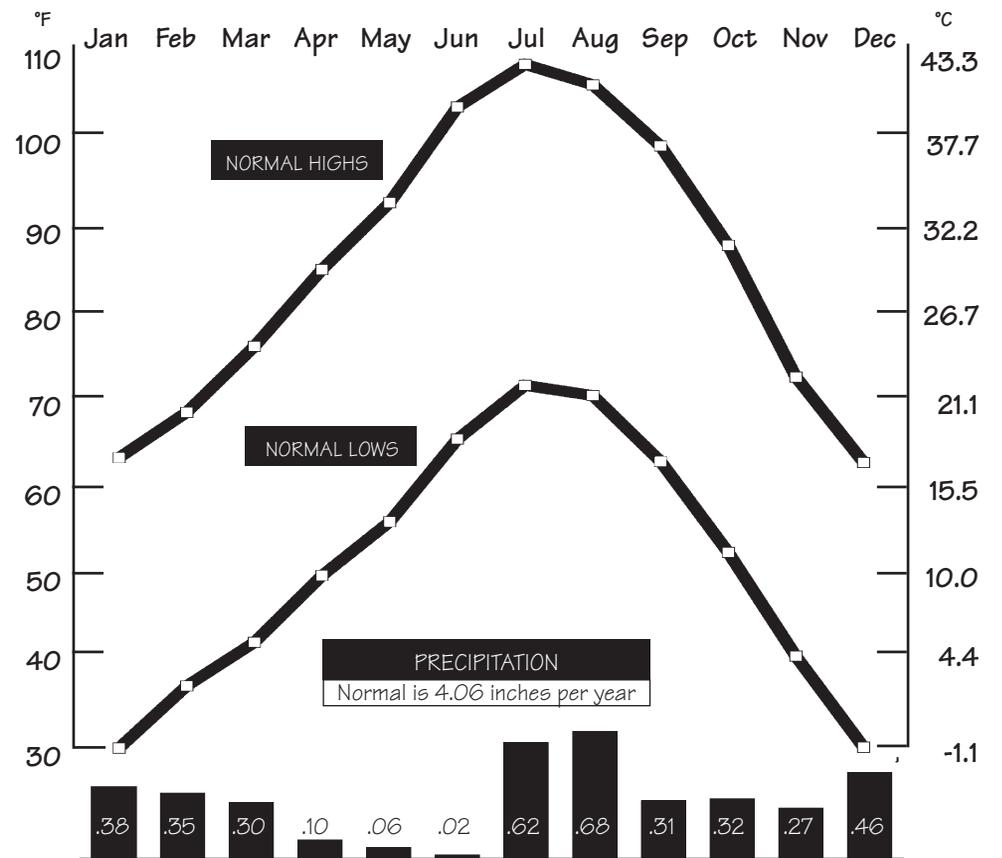

In recent years, park managers have been forced to close areas due to excessive vandalism. Some resources have been damaged to the extent that they can never be fully cleaned or replaced.

Take your time and enjoy the natural and cultural resources protected here as you journey through the park.

All parts of the park are protected by federal law.

Despite its apparent harshness, the desert is a land of extreme fragility. And remember, graffiti in a national park is not art.

The Weather

Measurements were taken at 1,960 feet. You can expect seven to 12 degrees cooler temperatures and 3.5 inches more precipitation at higher elevations.

Rockpiles

The geologic landscape of Joshua Tree has long fascinated visitors to this desert. How did the rocks take on such fantastic shapes? What forces sculpted them?

Geologists believe the face of our modern landscape was born more than 100 million years ago. Molten liquid, heated by the continuous movement of Earth's crust, oozed upward and cooled while still below the surface of the overlying rock. These plutonic intrusions are a granitic rock called monzogranite.

The monzogranite developed a system of rectangular joints. One set, oriented roughly horizontally, resulted from the removal, by erosion, of the miles of overlying rock, called gneiss (pronounced "nice"). Another set of joints is oriented vertically, roughly paralleling the contact of the monzogranite with its surrounding rocks. The third set is also vertical, but cuts the second set at high angles. The resulting system of joints tended to develop rectangular blocks. (figure 1) Good examples of the joint system may be seen at Jumbo Rocks, Wonderland of Rocks, and Split Rock.

As ground water percolated down through the monzogranite's joint

fractures, it began to transform some hard mineral grains along its path into soft clay, while it loosened and freed grains resistant to solution. Rectangular stones slowly weathered to spheres of hard rock surrounded by soft clay containing loose mineral grains. Imagine holding an ice cube under the faucet. The cube rounds away at the corners first, because that is the part most exposed to the force of the water. A similar thing happened here, but over millions of years, on a grand scale, and during a much wetter climate. (figure 2)

After the arrival of the arid climate of recent times, flash floods began washing

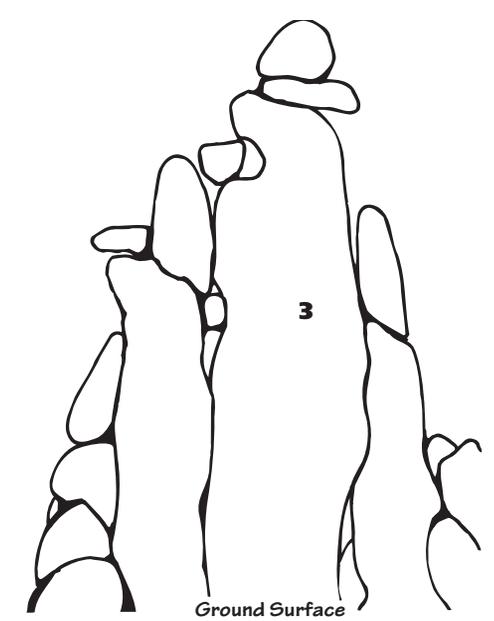

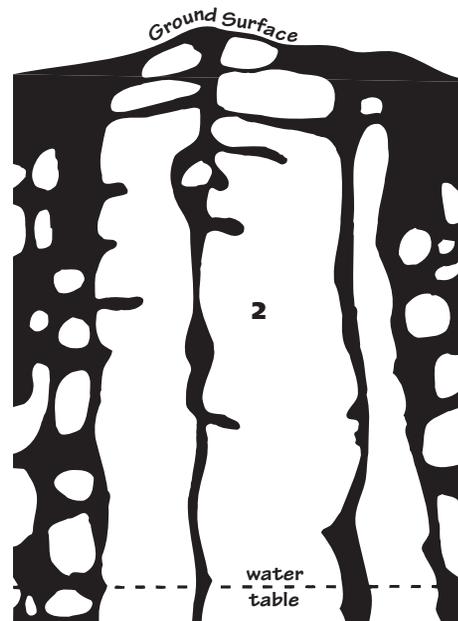

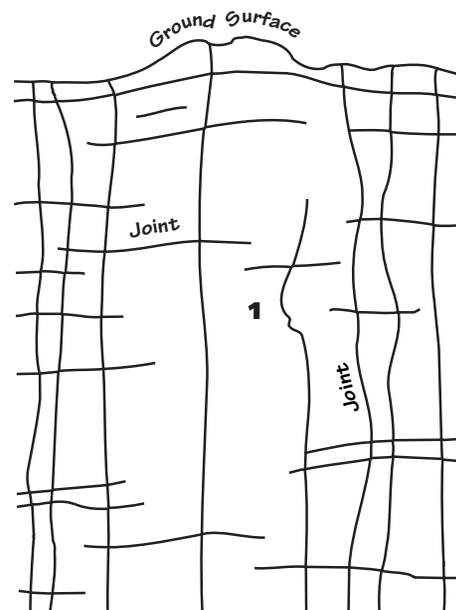

away the protective ground surface. As they were exposed, the huge eroded boulders settled one on top of another, creating those impressive rock piles we see today. (figure 3)

Visitors also wonder about the "broken terrace walls" laced throughout the boulders. These are naturally occurring formations called dikes. Younger than the surrounding monzogranite, dikes were formed when molten rock was pushed into existing joint fractures. Light-colored dikes formed as a mixture of quartz and potassium minerals cooled in these tight spaces. Suggesting the work of a stonemason,

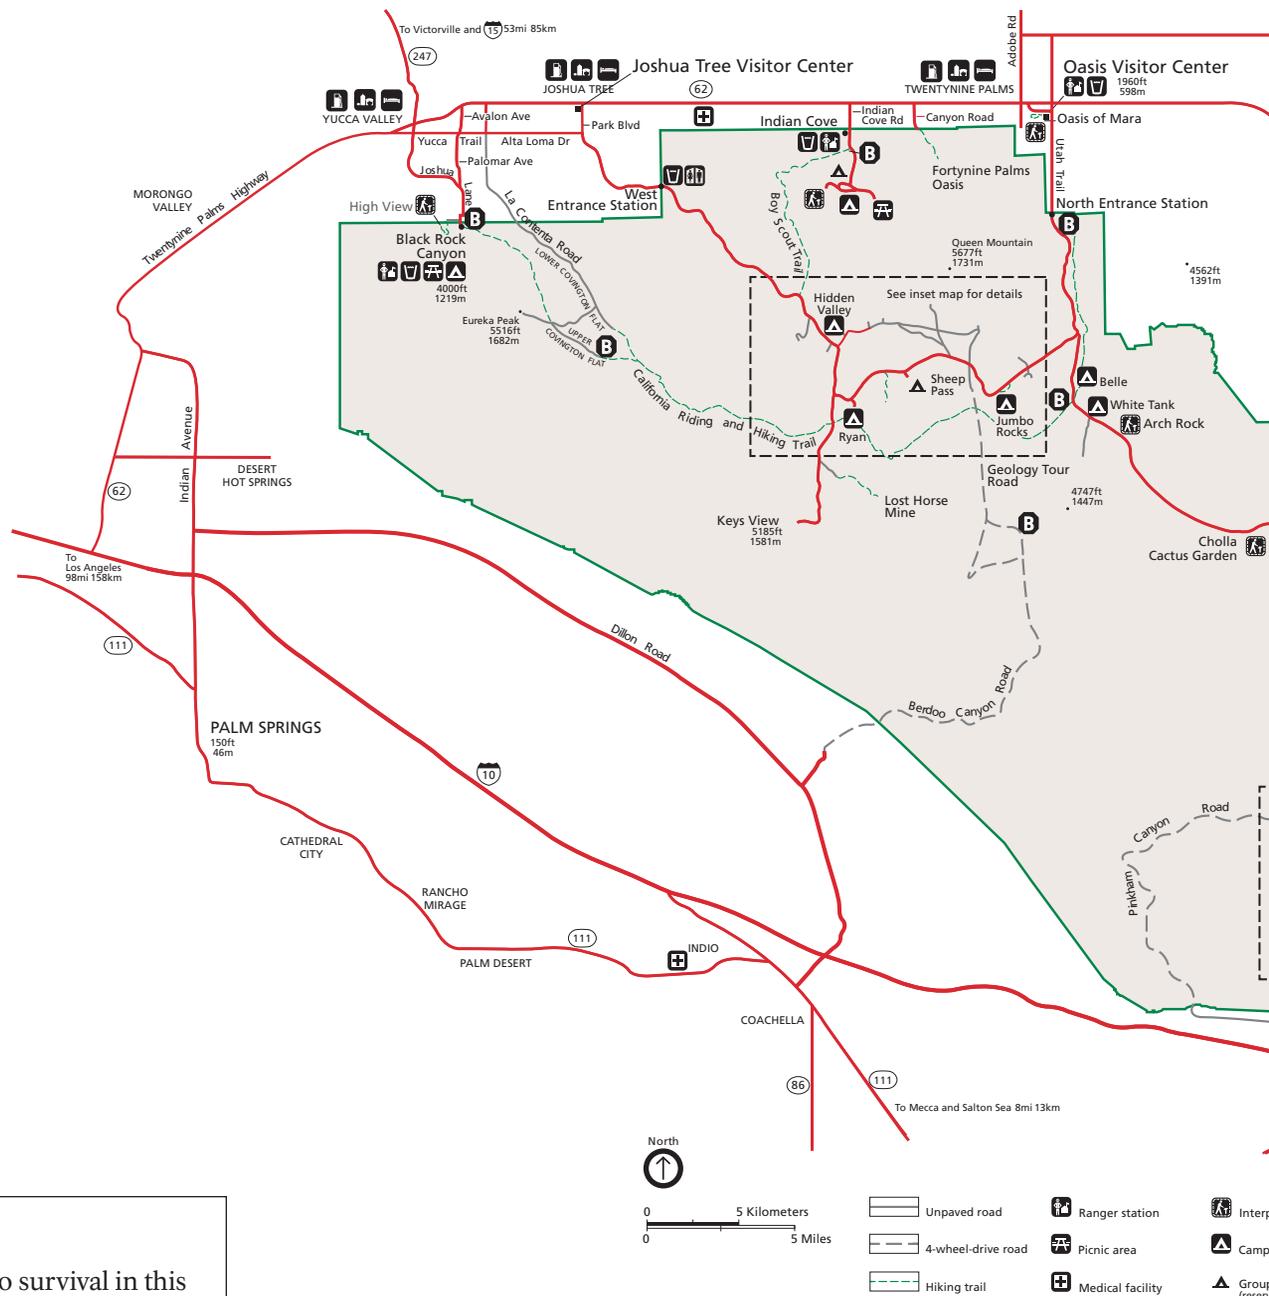

they broke into uniform blocks when they were exposed to the surface.

Of the dynamic processes that erode rock material, water, even in arid environments, is the most important. Wind action is also important, but less so than the action of water.

The processes operating in the arid conditions of the present are only partially responsible for the sculpturing of the rocks. The present landscape is essentially a collection of relic features inherited from earlier times of higher rainfall and lower temperatures.

Ranger Programs

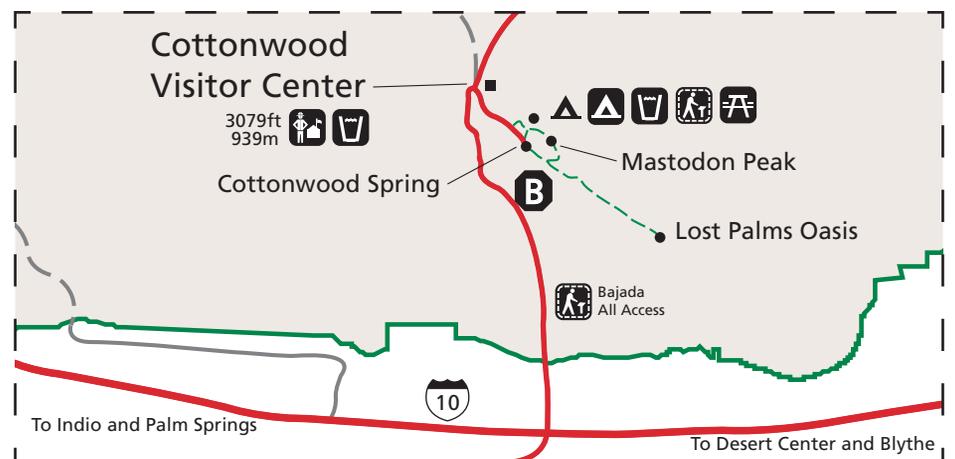

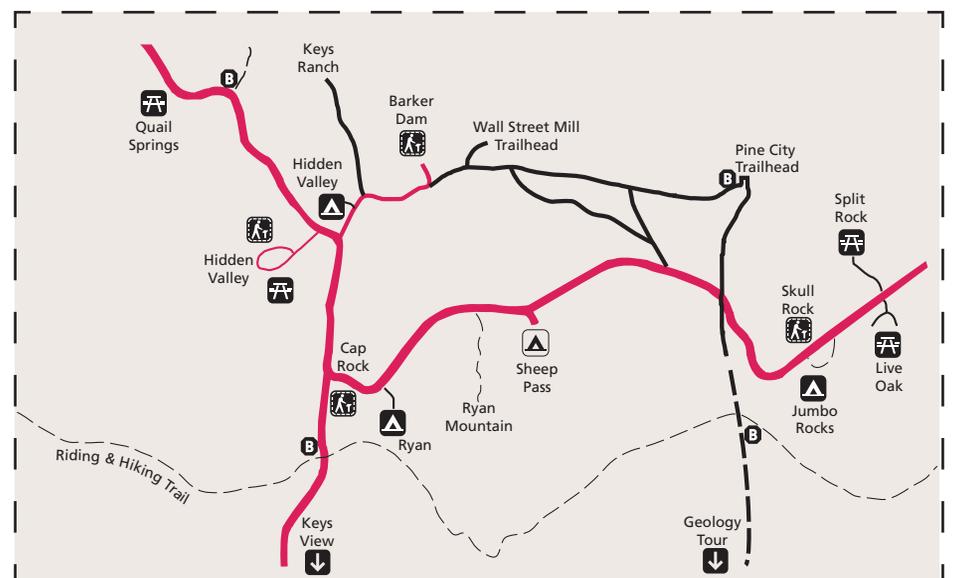

Discover how humans, wildlife, and vegetation have adapted to survival in this arid landscape. Get insight into how geologic forces shape the land we see today. Learn about the past, present, and future with a knowledgeable, friendly ranger.

Guided tours, patio talks, and evening programs are just a few ways you can get better connected with Joshua Tree National Park.

Availability varies with the season and weather conditions. Check at any visitor center for a complete list of programs and events.

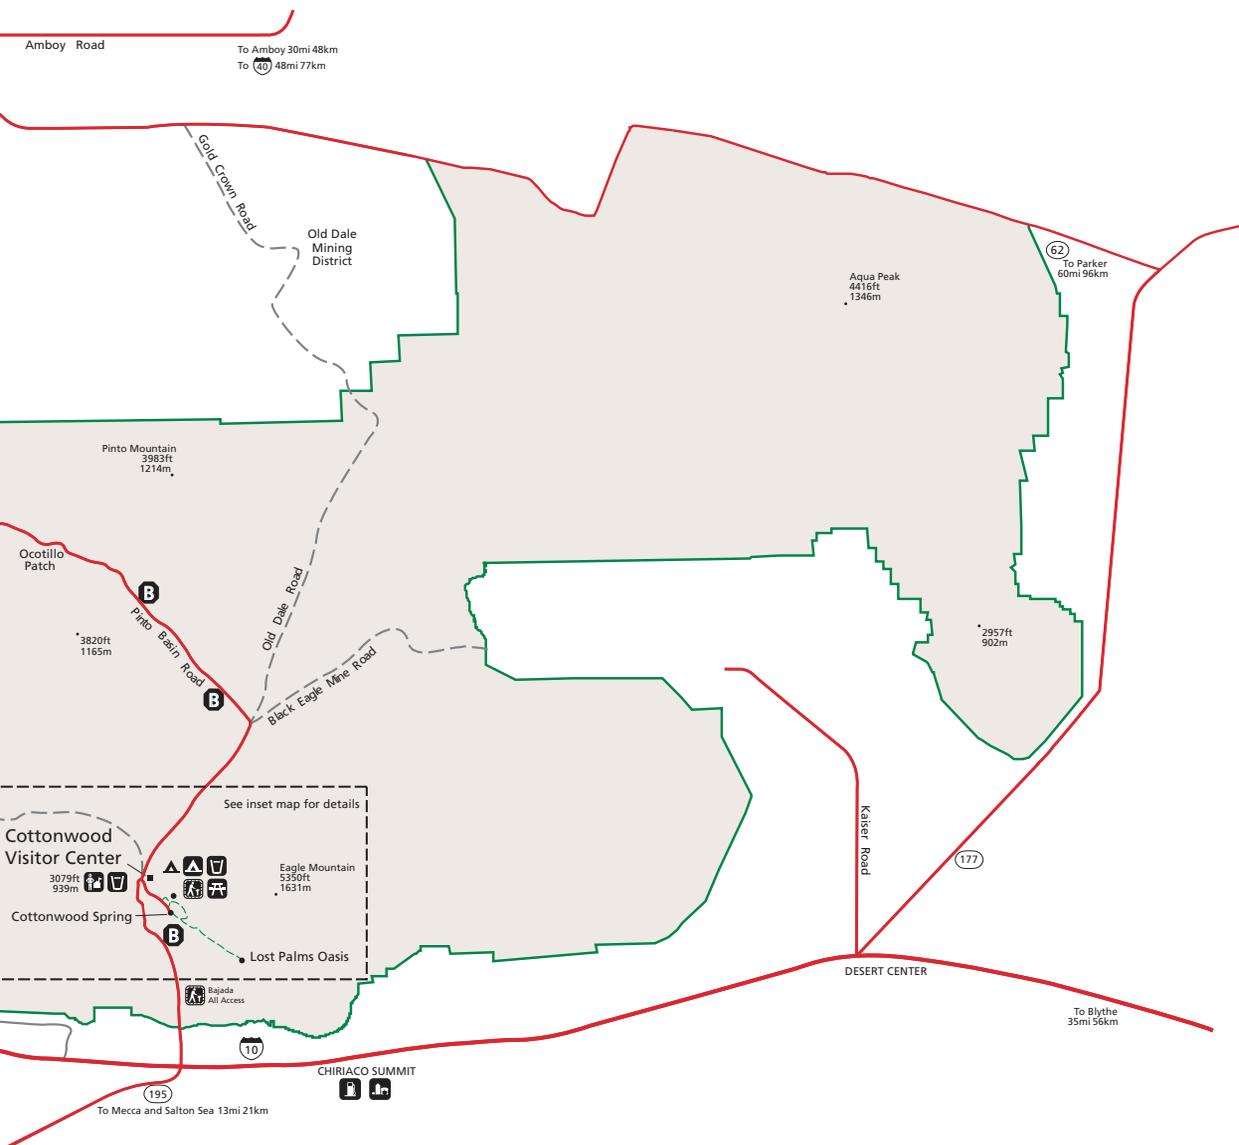

Program schedule for February through May:

<p>Keys Ranch Tours* Fridays and Saturdays at 10 am & 2 pm; Sundays at 10 am (2 hours)</p>	<p>Cap Rock Discovery Hike Sundays at 2 pm (45 minutes)</p>
<p>Cholla Cactus Garden Talk Wednesdays from 10 am to noon (A ranger will be present giving 15 minute talks.)</p>	<p>Evening Programs Fridays at 7 pm at Jumbo Rocks & Cottonwood campground amphitheaters. Saturdays at 7 pm at Indian Cove campground amphitheater.</p>
<p>Cottonwood Canyon Hike Saturdays at 2 pm (45 minutes)</p>	<p>*Reservations are required prior to the day of the tour. Fees: adults (12 and over) \$5.00, Senior and Access Pass holders \$2.50, children (6 - 11) \$2.50. Children under six are free.</p>

For Kids

Stop at an entrance station or visitor center and pick up a Junior Ranger booklet; it is free. Complete the activities and return the booklet to a ranger at an entrance station or visitor center to receive a Joshua Tree Junior Ranger badge.

- Interpretive Trail
- Backcountry board
- Campground (reservations required)
- Restrooms
- Backcountry board
- Drinking water

NATURE TRAILS

Trail	Mileage	Starting Point
Arch Rock	.3-mile loop (.5-km)	White Tank Campground, opposite site 9
Bajada All-Access	.25-mile loop (.4-km)	South of Cottonwood, one-half mile from the southern entrance to the park
Barker Dam	1.1-mile loop (1.8-km)	Barker Dam parking area
Cap Rock	.4-mile loop (.6-km)	Cap Rock parking area, at the junction of Park Blvd. and Keys View Road
Cholla Cactus Garden	.25-mile loop (.4-km)	20 miles north of Cottonwood Visitor Center
Hidden Valley	1-mile loop (1.6-km)	Hidden Valley picnic area
Hi-View	1.3-mile loop (2.1-km)	Northwest of Black Rock Campground
Indian Cove	.6-mile loop (1-km)	West end of Indian Cove Campground
Keys View	.25-mile loop (.4-km)	Keys View
Oasis of Mara	.5-mile loop (.8-km)	Oasis Visitor Center, Twentynine Palms
Skull Rock	1.7-mile (2.7-km)	Jumbo Rocks Campground

HIKING TRAILS

Trail	Round-trip Mileage	Time	Starting Point	Trail Description
Boy Scout Trail	16 miles (25.8 km)	1-2 days	Indian Cove backcountry board or Keys West backcountry board 0.5 mile (0.8 km) east of Quail Springs Picnic area	Scenic trail through the western most edge of the Wonderland of Rocks. See backcountry board for information on overnight use. Moderate.
49 Palms Oasis	3 miles (4.8 km)	2-3 hours	Parking area at end of Canyon Road, 4 miles (6.4 km) west of Twentynine Palms off Hwy 62	Several stands of fan palms, evidence of past fires, and pools of water are found at the oasis. The plants in this area are especially fragile, so walk lightly. Moderately strenuous.
Lost Horse Mine/Mt.	4 miles (6.4 km)	3-4 hour	Parking area 1.2 miles (1.9 km) east of Keys View Road	Site of ten-stamp mill and foundations. Summit elevation: 5278 feet (1609 m). Moderately strenuous.
Ryan Mountain	3 miles (4.8 km)	2-3 hours	Ryan Mountain parking area or Sheep Pass Campground	Excellent views of Lost Horse, Queen, and Pleasant Valleys. Summit elevation: 5461 feet (1664 m). Moderately strenuous.

Thirty-five miles of the California Riding and Hiking Trail pass through the park. Access to the trail is at its junction with Covington Flats, Keys View, and Squaw Tank (Geology Tour) Roads; at Ryan Campground; south of Belle Campground; and near the north entrance to the park. This allows for shorter hikes of 4, 6.7, or 11 miles (6.4, 10.7, or 17.6 km). Two to three days are required to hike the entire length of the trail.

Temporary Closure of Cottonwood Trails

Due to a heavy flash flood in 2011 and again in 2013, tailings from historic mining were churned up, exposing heavy metals that are a health and safety issue to people.

The following trails are temporarily closed:

- Cottonwood Spring Oasis
- Lost Palms Oasis
- Mastodon Peak

Alternate Cottonwood Area Trail Options:

- Silvia's Wash (1.5mi/2.4km roundtrip)
- Pinto Dunes (2mi/3.2km roundtrip)

Campgrounds	Elevation	Sites	Group Fee	Group Sites	Horse Camp	Water	Flush Toilets	Chemical Toilets	Tables	Fire Grates	Dump Station
Belle	3800'	18	\$10					*	*	*	
Black Rock	4000'	100	\$15		\$15	*	*		*	*	*
Cottonwood	3000'	62	\$15	3	\$30	*	*		*	*	*
Hidden Valley	4200'	45	\$10					*	*	*	
Indian Cove	3200'	101	\$15	13	\$25/40			*	*	*	
Jumbo Rocks	4400'	125	\$10					*	*	*	
Ryan	4300'	31	\$10		\$10			*	*	*	
Sheep Pass	4500'			6	\$25/40			*	*	*	
White Tank	3800'	15	\$10					*	*	*	

Campsites are limited to six people, three tents, and two cars. Group sites accommodate ten to 60 people.

Obtain reservations up to six months in advance for sites at Black Rock, Indian Cove, and all group sites by calling 1-877-444-6777. Other campgrounds are first come-first served. Camp only in designated campsites.

There are no hookups for RVs. RVs may not exceed 25 feet in length at Hidden Valley, Indian Cove groups sites, or White Tank. At White Tank, the 25-foot limit includes the towing vehicle. RVs are prohibited at Sheep Pass and Cottonwood group sites.

Water is available at Oasis Visitor Center, Indian Cove Ranger Station, West Entrance, and Black Rock and Cottonwood campgrounds. Showers are not available.

Store food in containers capable of preventing access by wildlife, or in your vehicle. Any scented or odorous items must be similarly stored.

All vegetation is protected. Do not collect firewood.

Quiet hours are from 10 pm to 6 am. Generator use is limited to six hours a day: 7 to 9 am, noon to 2 pm, and 5 to 7 pm.

There is a 30-day camping limit each year. However, only 14 nights total may occur from October through May.

Be an inspiration to others; leave your campsite cleaner than you found it.

What To See And Do

Viewed from the road the desert may appear bleak and drab. Closer examination reveals a fascinating variety of plants and animals and surreal geologic features. Joshua Tree National Park offers visitors endless opportunities for exploration and discovery. Depending on the number of hours you have to spend, your interests and energy, here are some ideas to consider:

IF YOU HAVE FOUR HOURS OR LESS, begin your tour at a park visitor center. Park staff will be happy to provide you with current information about conditions in the park as well as answers to your questions.

With limited time you may want to confine your sightseeing to the main park roads. Many pullouts with wayside exhibits dot these roads. A list of nature trails and short walks appears in this publication. Consider experiencing at least one of these walks during a short park visit.

On clear days the vista from Keys View extends beyond Salton Sea to Mexico and is well worth the additional 20-minute drive.

IF YOU PLAN TO SPEND AN ENTIRE DAY, there will be time to walk several nature trails or take a longer hike; several are listed on page 7 of this publication. A ranger-led program will add enjoyment and understanding to your visit. Check at visitor centers and on campground bulletin boards for listings. Or, call ahead and reserve a spot on the popular Keys Ranch guided walking tour.

Some visitors like to experience the desert from the seat of a mountain bike. The park offers an extensive network of dirt roads that make for less crowded and safer cycling than the paved main roads. A selection of road trips is included in the article titled Backcountry Roads in this publication.

Joshua Tree has gained international attention as a superb rock-climbing area. Many visitors enjoy watching the rock climbers in action.

WITH MORE THAN ONE DAY IN THE PARK, your options increase. There are nine campgrounds and backcountry camping is permitted. You will find information concerning camping and backcountry use elsewhere in this publication.

Books and topographic maps give information needed for longer hikes. For “peak baggers,” the park has ten mountains over 5,000 feet (1,524 m) in elevation. Or make it your goal to hike to all the park oases. Other trails lead you to remnants of the gold mining era, a colorful part of the park’s cultural history.

Whatever you choose, your time will be rewarding. The desert holds much more than what is readily apparent to the casual observer. *A note of caution:* The desert, fascinating as it is, can be life-threatening for those unfamiliar with its potential dangers. It is essential that you carry water with you—even if you are only driving through. Cars break down; keys get locked inside; accidents happen.

Backcountry Roads

for mountain bikes and 4-wheel-drive vehicles

Mountain bikes and 4-wheel drive vehicles are welcome in the park. For your own safety and for the protection of natural features, stay on established roads. Tire tracks on the open desert can last for years and will spoil the wilderness experience of future hikers.

Paved roads in the park are narrow with soft shoulders. Curves, boulder piles, and Joshua trees restrict the vision of bikers and motorists. The unpaved roads in the park are safer for bikes and offer many opportunities to explore the area. Here is a sampling:

Pinkham Canyon Road

This challenging 20-mile (32.4-km) road begins at Cottonwood Visitor Center, travels along Smoke Tree Wash, and then cuts down Pinkham Canyon. Sections of the road run through soft sand and rocky flood plains. The road connects to a service road next to I-10.

Black Eagle Mine Road

Beginning 6.5 miles (10.5 km) north of Cottonwood Visitor Center, this dead-end dirt road runs along the edge of Pinto Basin, crosses several dry washes, and winds through canyons in the Eagle Mountains. The first nine miles (14.5 km) are within the park boundary. Beyond that point is Bureau of Land Management land and a number of side roads. Several old mines are located near these roads. Use extreme caution when exploring old mines.

Old Dale Road

This 23-mile (37.3 km) road starts at the same point as Black Eagle Mine Road. The first 11 miles (17.8 km), cross Pinto Basin, a flat, sandy dry-lake bed. Leaving the basin, the road

climbs a steep hill, then crosses the park boundary. A number of side roads veer off toward old mines and residences. The main road leads to CA HWY 62, 15 miles (24.3 km) east of Twentynine Palms.

Queen Valley Roads

A network of roads, totaling 13.4 miles (21.7 km), crosses this valley of boulder piles and Joshua trees. A bike trip can begin at Hidden Valley or the dirt road opposite Geology Tour Road. Bike racks have been placed in this area so visitors can lock their bikes and go hiking.

Geology Tour Road

An 18-mile motor tour leads through a fascinating landscapes. The road turns south from the paved road two miles (3.2 km) west of Jumbo Rocks Campground. There are 16 stops and it takes approximately two hours to make the round trip. The distance from the junction to Squaw Tank is 5.4 miles (8.8 km) This section is mostly downhill but bumpy and sandy. Starting at Squaw Tank, a 6-mile (9.7 km) circular route explores Pleasant Valley. A descriptive brochure that highlights each stop is available at the beginning of the road.

Covington Flats

The dirt roads in Covington Flats offer access to some of the park’s largest Joshua trees, junipers, and pinyon pines. From Covington Flats picnic area to Eureka Peak is 3.8 miles (6.2 km) one-way. The dirt road is steep near the end, but the top offers views of Palm Springs, the surrounding mountains, and the Morongo Basin. Your trip will be 6.5 miles (10.5 km) longer if you ride or drive over to the backcountry board, a starting point for excellent hiking.

BACKCOUNTRY CAMPING, HIKING, *and* HORSEBACK RIDING

Joshua Tree National Park is a backpacker's dream with its mild winter climate and interesting rock formations, plants, and wildlife. It embraces 794,000 acres, of which 585,040 acres have been designated wilderness. By observing the guidelines below, your venture into the backcountry should be safe and enjoyable. If you have questions, ask a ranger. It is your responsibility to know and abide by park regulations.

Registering

If you will be out overnight, register at a backcountry board. The map in this publication indicates the location of the twelve backcountry boards. An unregistered vehicle or a vehicle left overnight somewhere other than at a backcountry board is a cause for concern about the safety of the vehicle's occupants. It is also subject to citation and towing.

Hiking

It is easy to get disoriented in the desert: washes and animal trails crisscross the terrain obscuring trails, boulder piles are confusingly similar, and there are not many prominent features by which to guide yourself. Do get yourself a topographic map and compass or GPS unit and learn how to use them before you head out. Cell phones are often not usable inside the park.

Know your limitations and don't take risks. You should not attempt to climb steep terrain without adequate equipment, conditioning, and training. Accidents can be fatal.

Carry a minimum of one gallon of water per person per day just for drinking, two gallons in hot weather or if you are planning a strenuous trip. You will need additional water for cooking and hygiene. And don't forget the other essentials: rain protection, a flashlight, a mirror and whistle, a first-aid kit, pencil and paper, a pocket knife, and extra food.

Locating your camp

Your wilderness camp must be located one mile from the road and 500 feet from any trail. Make yourself aware of any day-use areas in the vicinity (they are indicated on the maps at the backcountry boards) and make certain to camp outside their boundaries.

Black Rock Canyon Offers Good Hiking and More

Located in the northwest corner of the park, the road to Black Rock Canyon dead-ends at the campground. Campsites are located on a hillside at the mouth of the canyon surrounded by Joshua trees, junipers, cholla cactus, and a variety of desert shrubs. Spring blooms usually begin with the Joshua trees in late February followed by shrubs and annuals through May.

This quiet, family campground is a good introduction for first-time campers. Each campsite has a picnic table and fire ring with rest rooms and water nearby. If you forget to bring your firewood, shopping facilities are only five miles away in the town of Yucca Valley. Campsites vary in size and can accommodate both tents and RVs. A day-use picnic area and a dump station are also available. For horse owners, a separate area is provided for camping or for staging a ride.

Campers register and pay camping fees at the nature center located in the middle of the campground. The staff at this small visitor center can help you plan a hike or other activity. Maps, books, nature guides, and children's activity books may be purchased there.

The hills behind the campground offer a variety of hiking

Washes may seem like inviting places to sleep because they are relatively level, but it is important to realize that they got that way because flash floods "bulldozed" the rocks and vegetation out of the way.

Domestic issues

Water sources in the park are not potable and are reserved for wildlife, so you will have to carry an adequate supply for drinking, cooking, and hygiene. You will want to give some thought to the trade-off between the water required to hydrate dried foods and the heftier weight of canned and fresh foods. If you want to heat something, you will need to pack in a stove and fuel, as open fires are prohibited in the backcountry.

Bring plastic bags to hold your garbage, and pack it out. Buried trash gets dug up by animals and scattered by the wind; it is not a pretty sight. Do bury human waste in "cat" holes six-inches deep. Don't bury your toilet paper; put it in plastic (zip-locks work nicely) and pack it out. Leave no trace, as they say.

Coping with the weather

That old desert sun can damage eyes as well as skin. Wear a hat and sunglasses and use sun-blocking lotion liberally.

Temperature changes of 40 degrees within 24 hours are common. Bring a variety of clothes so you can layer on and off as conditions change.

Although rain is relatively rare in the desert, when it does come it can really pour down. Even when it isn't raining where you are, rain in the mountains can run off so fast as to cause flash floods. Stay alert.

Horseback riding

Horseback riding is a popular way to experience the backcountry and there are 253 miles of equestrian trails that traverse open lands, canyon bottoms, and dry washes. Because of the special requirements for horses, care should be taken in planning your trip. You may call 760-367-5500 and request that additional information be mailed to you.

trails including the Hi-View Nature Trail. The interpretive guide for this trail, available at the nature center, identifies the vegetation along this scenic 1.3-mile walk. For those looking for longer trails, Eureka Peak, Panorama Loop, and Warren Peak take hikers to ridge lines overlooking the often snowy peaks of San Jacinto and San Gorgonio. The trailhead for a 35-mile section of the California Riding and Hiking Trail is located at Black Rock. Backpackers can register at the backcountry board here for overnight wilderness trips.

But you don't have to hike to enjoy the Black Rock Canyon area. Wildlife sightings are frequent in the campground. Visitors often encounter ground squirrels, jackrabbits, and cottontails. Frequent bird sightings include cactus wrens, Gambel's quail, great horned owls, scrub-jays, and roadrunners. A lucky birder might be rewarded with a glimpse of a Scott's oriole, pinyon jay, or LeConte's thrasher. More elusive species such as bobcat, bighorn sheep, mountain lions, desert tortoises, and mule deer have all been seen in the area. As the sun sets, listen for the "singing" of coyotes living on the outskirts of the campground.

Please do not feed wild animals in Joshua Tree National Park. People food is unhealthy for them and they could become aggressive and harm you.

The National Park Service cares for the special places saved by the American people so that all may experience our heritage.

Enjoy animals at a distance.
Never feed or approach them.
Store food and trash properly.

"I Speak for the Trees" Dr. Seuss, *The Lorax*

Surrounded by twisted, spiky trees straight out of a Dr. Seuss book, you might begin to question your map. Where are we anyway? In wonder, the traveler pulls over for a snapshot of this prickly oddity; the naturalist reaches for a botanical guide to explain this vegetative spectacle; and the rock climber shouts "Yowch!" when poked by dagger-like spines on the way to the 5.10 climbing route.

a Joshua tree

Known as the park namesake, the Joshua tree, *Yucca brevifolia*, is a member of the Agave family. (Until recently, it was considered a giant member of the Lily family, but DNA studies led to the division of that formerly huge family into 40 distinct plant families.) Like the California fan palm, *Washingtonia filifera*, the Joshua tree is a monocot, in the subgroup of flowering plants that also includes grasses and orchids. Don't confuse the Joshua tree with the Mojave yucca, *Yucca schidigera*. This close relative can be distinguished by its longer, wider leaves and fibrous threads curling along leaf margins. Both types of

a Mojave yucca

yuccas can be seen growing together in the park. The Joshua tree provides a good indicator that you are in the Mojave Desert, but you may also find it growing next to a saguaro cactus in the Sonoran Desert in western Arizona or mixed with pines in the San Bernardino Mountains.

Years ago the Joshua tree was recognized by American Indians for its useful properties: tough leaves were worked into baskets and sandals, and flower buds and raw or roasted seeds made a healthy addition to the diet. The local Cahuilla have long referred to the tree as "hunuvat chiy'a" or "humwichawa"; both names are used by a few elders fluent in the language.

By the mid-19th century, Mormon immigrants had made their way across the Colorado River. Legend has it that these pioneers named the tree after the biblical figure, Joshua, seeing the limbs of the tree as outstretched in supplication, guiding the travelers westward. Concurrent with Mormon settlers, ranchers and miners arrived in the high desert with high hopes of raising cattle and digging for gold. These homesteaders used the Joshua tree's limbs and trunks for fencing and corrals. Miners found a source of fuel for the steam engines used in processing ore.

Today we enjoy this yucca for its grotesque appearance, a surprising sight in the landscape of biological interest. The Joshua tree's life cycle begins with the rare germination of a seed, its survival dependent upon well-timed rains. Look for sprouts growing up from within the protective branches of a shrub. Young sprouts may grow quickly in the first five years, then slow considerably thereafter. The tallest Joshua tree in the park looms a whopping forty feet high, a grand

a Joshua tree bloom

another Joshua tree

presence in the Queen Valley forest; it is estimated to be over 100 years old! These "trees" do not have growth rings like you would find in an oak or pine, which makes aging difficult.

Spring rains may bring clusters of white-green flowers on long stalks at branch tips. Like all desert blooms, Joshua trees depend on just the perfect conditions: well-timed rains, and for the Joshua tree, a crisp winter freeze. Researchers believe that below freezing temperatures may damage the growing end of a branch and stimulate flowering, followed by branching. You may notice some Joshua trees grow like straight stalks; these trees have never bloomed—which is why they are branchless. In addition to ideal weather, the pollination of flowers requires a visit from the yucca moth. The moth collects pollen while laying her eggs inside the flower ovary. As seeds develop and mature, the eggs hatch into larvae, which feed on the seeds. The tree relies on the moth for pollination and the moth relies on the tree for a few seeds for her young—a happy symbiosis. The Joshua tree is also capable of sprouting from roots and branches. Being able to reproduce vegetatively allows a much quicker recovery after damaging floods or fires, which may kill the main tree.

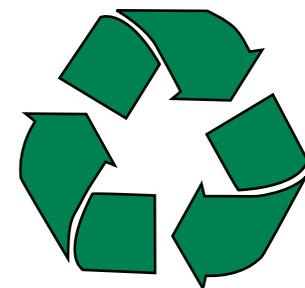

Many birds, mammals, reptiles, and insects depend on the Joshua tree for food and shelter. Keep your eyes open for the yellow-and-black flash of a Scott's oriole busy making a nest in a yucca's branches. At the base of rocks

you may find a wood-rat nest built with spiny yucca leaves for protection. As evening falls, the desert night lizard begins poking around under the log of a fallen Joshua tree in search of tasty insects.

You may be at ease with pine or hardwood, or find shade under the domesticated trees in your city park, but in the high desert, Joshua is our tree. It is an important part of the Mojave Desert ecosystem, providing habitat for numerous birds, mammals, insects, and lizards. Joshua tree forests tell a story

of survival, resilience, and beauty borne through perseverance. They are the silhouette that reminds those of us who live here that we are home. Like the Lorax we speak for the trees, but often the trees speak to us.
